Re: Prajwal Kumar, 31/6/2001
Dear ENT Department
I am writing to refer this patient for your assessment. They have complained of an obstructed nose worse following an injury playing rugby 6 weeks ago. He reports that the nose is no longer symmetrical and he wonders whether this has contributed to his symptom. He has no history of epistaxis, but has reported increased nasal discharge and sneezing.
Past Medical History: Eczema, Hay fever
No previous operations.
Current Medications: Topical hydrocortisone for eczema as needed, and Loratidine
He is a student and lives in student accommodation. He denies smoking and drugs and drinks alcohol.
AM-^@
Given the chronicity of the symptoms and potential for surgical correction, I feel an ENT review would be valuable.
Warm regards,
Dr. Martin
